# **VARUN MANAGEMENT SYSTEM (Varun Group)**

- Varun Management System (VMS) is an enterprise-level car sales and inventory management application designed to manage the end-to-end operations of automobile dealerships.
- The system streamlines processes such as vehicle inventory tracking, sales management, customer onboarding, booking, invoicing, and reporting across multiple branches and regions.
- Integrated PostgreSQL database with Sequelize ORM and optimized complex queries
- Used transactions to maintain data consistency across sales, stock, and booking modules
- Implemented authentication & authorization with role-based access control
- Developed modules for vehicle stock movement, back-dated stock reports, and branch-wise inventory tracking
- Validated APIs using Postman and handled error responses with proper HTTP status codes
- Debugged and fixed production issues related to data integrity and performance

**Technologies Used :** HTML5, CSS3, JavaScript, ES6, ANT - D, Reactjs, Redux, Nodejs, Expressjs, REST full API's, PostgresSQL.
